DETAILED ACTION

Status of Claims

Claims 1, 3, 9, 11, and 14-20 are pending in this application.

Claims 2, 4-8, 10, and 12-13 have been cancelled.

Claims 1, 3, 9, 11, and 14-20 have been rejected.

Response to Amendment

The amendments to the claims have been received and acknowledged by the Examiner.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 3, 9, 11, and 14-20 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al (JP 08217713) in view of Fennhoff (US 5,914,431)

and optionally in view of Shinagawa et al (JP 09124530) for the reasons set forth in the office action of 8/9/2007 and as detailed below.

Arguments

Applicants argue that Takahashi et al does not teach the use of a phenolic compound represented by the recited formula I that comprises phenol or a C1-4 alkyl phenol, as recited in claim 1. Applicants go on to say that Fennhoff and Shinagawa singularly or in combination fail to disclose what is missing in Takahashi.

Applicants also argue that none of the prior arts used teach the proportion weight ratios of the reactants etc.

Response to Arguments

The Examiner contends that Shinagawa does in fact teach the use of a phenolic compound represented by the recited formula I that comprises phenol or a C1-4 alkyl phenol, as recited by applicants in claim 1. Also, Takahasi teaches using a phenolic compound that meets the limitations of formula 1, where $n = 0$, the phenolic compound reads simply on phenol which is what Takahasi uses and is recited in the claims. Please see RX (3) of 5 of the ACS STN printout.

The reaction of fluorenone with phenol in the presence of catalyst is known in the art. The adjustment of reactant concentrations is art standard and absent unexpected results or evidence to the contrary, the Examiner contends that merely modifying the process conditions such as temperature and concentration is not a patentable modification absent a showing of criticality. In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). Please note that this includes weight ratios.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
